1 Business Administration

The job opportunities for graduates of the M.Sc. Business Administration programme combine tasks requiring specialist expertise and responsibility for HR and budget matters in businesses. Specialist expertise is acquired through the chosen major. Management components are covered through content concerning management roles and the requirements they pose with regard to analytical thinking in dynamic contexts, method-driven, target-oriented behaviour, reliability and stress resistance in planning and reporting phases and confident intercultural communication in line with the situation at hand, including English-speaking environments. The communication skills required include those needed for situations in which employees and clients need to be involved, informed or given feedback. The specifics of each major are described in the following sections.

1.1 Content and objectives of the programme

The master's degree corresponds to level 7 of the German Qualifications Framework/European Qualifications Framework, and to the master's level of the German Qualifications Framework for University Degrees. The competencies which are acquired during the course of studies are listed below as "Intended Learning Outcomes". These Intended Learning Outcomes are comprised of "Learning Goals" and "Learning Objectives". The former are superordinate goals for the graduates of this study programme, while the latter refer to concrete tasks performed by the students.

	Graduates act as/with
	theory-based finance and tax professionals to identify and address future business challenges.
	Students evaluate theories and concepts in the field of Accounting & Taxation.
ical	Students write an independent scientific paper on selected issues in the field of Accounting & Taxation based on literature and data.
l analyt ies	innovative controlling problem solvers in order to optimize corporate financial processes in a sustainable manner.
related and ar	The students develop theory-based solution strategies for controlling problems.
Subject-related and analytical competencies	Students apply mathematical and statistical methods for financial analysis in a well-founded and solution-oriented manner.
Subje	specialists in legal problems in the field of taxation in order to effectively solve tax-related issues.
	The students understand (inter)national legal terms as well as methods and their function in the area of legal foundations.
	Students apply legal terms as well as methods in a well-founded manner to solve case studies.

valid for students of the ER 2021 (enrolment from winter semester 2021/22)

e and e es	successful discussion leaders for Accounting & Taxation in order to effectively coordinate decision-making processes.
Communicative cooperative competencies	Students discuss independently developed scientific positions or solutions to problems (e.g. taking into account legal, strategic and institutional aspects) with / in front of representatives from theory and practice.
Comr	Students justify and defend independently developed positions or solutions to problems, taking into account legal, strategic and institutional aspects.
al cies	responsible decision makers who face the ecological, ethical and social challenges of the future.
Personal	Students recognize the impact of financial and tax decisions on the achievement of corporate goals and on the capital market.
Con	Students act responsibly with regard to ecological, social or ethical criteria and develop an understanding of leadership roles in an intercultural and diverse context.

The Accounting and Taxation major focuses on the instruments used for internal and external accounting, including tax accounting. Graduates will have acquired a detailed understanding of theoretical knowledge and typical patterns of behaviour. In the areas of controlling, financial reporting and company taxation. They will have learned the meaning of enterprise value, compliance and social responsibility and will have achieved juristic methodological competences. Attractive career prospects can be found in controlling in small and medium-sized enterprises in a variety of industries, in tax consultancy and in audit firms.

1.2 Requirements

The admission requirement for the study programme is the completion of professionally qualifying degree in a relevant bachelor's programme. The programme should have had a minimum duration of at least six semesters, in which at least 180 credit points were acquired, or an equivalent successfully completed course of study with a final grade of 2.7 or better. Furthermore, B2 English language skills as well as C1 German language skills are required at the beginning of the programme.

These and other subject-related requirements for the course of study are defined in the <u>admission regulations</u>.

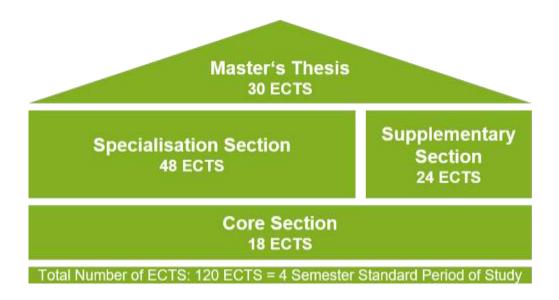

1.3 Programme structure

The master's in Business Administration is a 120 ECTS credits programme with a standard study period of four semesters. It is made up of the following sections:

- The core section (18 ECTS credits) consists of basic method modules chosen by the student.
- The specialisation section (48 ECTS credits) consists of modules for the respective major and a seminar.

valid for students of the ER 2021 (enrolment from winter semester 2021/22)

- The supplementary section (24 ECTS credits) allows students to choose from among a wide range of offerings in the fields of business administration, economics and social sciences.
- The last section is the master's thesis, worth 30 ECTS Credits.

1.4 Study Abroad Option

The WiSo Faculty offers a broad range of study abroad options within an excellent network of prestigious partner universities worldwide. The so-called Study Abroad Programme (STAP) includes ERASMUS exchanges and provides an opportunity for a single-term stay at one of the WiSo Faculty's partner universities.

Successful STAP applicants benefit from direct contact and organisational support at the partner university and are exempt from paying tuition fees there. The range of universities available depends on the master course on which the student is enrolled – the possible options are listed in the <u>WiSo Exchange (WEX) International Outgoings Portal</u> (access through the student's UoC account only), along with detailed information on each university.

Every year, in addition to the STAP programme, the WiSo Faculty organises an exclusive short-term study option WiSo@NYC which takes place in New York City.

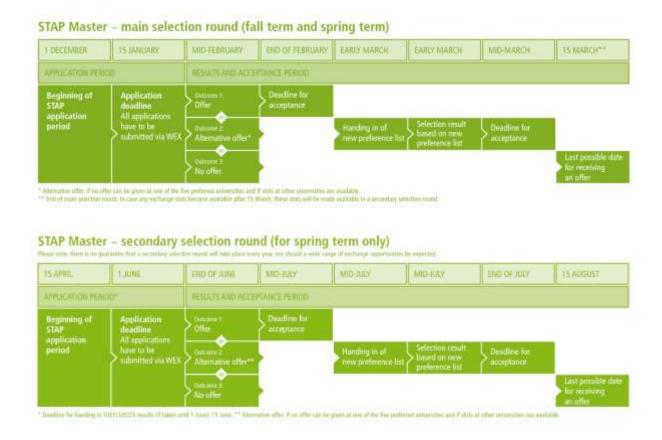

In addition to these options offered by the Faculty, master students can also apply for a non-WiSo exchange, offered by Dezernat 9 – Internationales (Central International Office of the University of Cologne) within the 'fakultätsübergreifende Partnerschaften' framework. Further possibilities are going abroad as a freemover (i.e. as a student who organises his or her stay abroad individually) or participating in short courses or summer schools offered under separate terms and conditions.

valid for students of the ER 2021 (enrolment from winter semester 2021/22)

For all study abroad options, the <u>International Relations Center</u> (ZIB WiSo) serves as point of information and advice.

The Faculty's Study Abroad Programme (STAP):

Master's students should plan and submit their application for a term abroad at the beginning of their master's studies. The STAP main selection round takes place once a year with an application deadline of 15th January and allows for an application either for fall term or spring term of the following academic year. Detailed information on the selection criteria and the best preparation for a STAP application can be found online in the <u>STAP Master Application Manual</u>. As an exception, if a certain number of slots are still available for spring term, a secondary STAP selection round will be offered in May, with a limited choice of exchange opportunities.

Credit transfer options from studies abroad:

The WiSo Faculty has put a lot of emphasis on internationalisation in the design of its master courses, offering broad credit transfer options for all kinds of study abroad options. Each master course includes at least one "Studies Abroad" module, with a broad range of courses suitable for credit transfer. In addition, a single course-to-course credit transfer can be considered. For more information on credit transfer rules and regulations, please go to <u>WiSo Credit Transfer Center</u> > Information > Studies Abroad. For any questions regarding credit transfer, students can contact the <u>ZIB WiSo</u> or the <u>WiSo Credit Transfer Center</u>.

valid for students of the ER 2021 (enrolment from winter semester 2021/22)

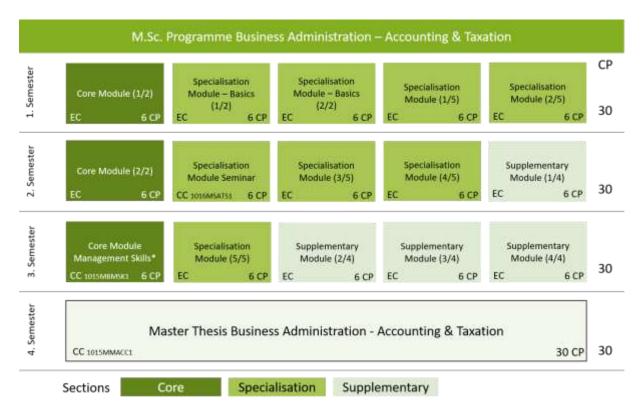

1.5 Sample study plan

A semester abroad is recommended in the third or fourth semester.

The module can be taken from the first semester onwards, there are no subject-specific requirements.
 The module is offered every semester.

^{**} Individual crediting of successfully completed studies abroad modules is possible.

The module can be taken from the first semester onwards, there are no subject-specific requirements.
 The module is offered every semester.

valid for students of the ER 2021 (enrolment from winter semester 2021/22)

1.6 Modules with mid-term examinations

Some modules have courses that only run for half a term and usually with twice the normal number of classes. For these modules, the term is divided into two roughly equal halves. In the fall, the mid-term usually ends at the beginning of December; in the spring, it is usually in the middle or at the end of May. Often, the examinations for these courses are held mid-term, enabling students to reduce their examination load at the end of term.

The information regarding the dates of courses and examinations can be found in the campus management system (KLIPS).

1.7 Calculation of the overall mark

The marks for core, supplementary and specialisation sections are calculated as the weighted arithmetic mean of the marks for the respective modules, based on the weighting system described in the examination regulations. In the case of end-of-module examinations consisting of several components, the mark for the module is calculated as specified in the **examination regulations**.

The overall mark for the degree is calculated as the weighted arithmetic mean of the marks for the subject categories and the mark for the master's thesis. For the Business Administration programme, the weighting for the contributions to the overall mark is as follows:

a) Mark for core section: 18 of 120 ECTS credits

b) Mark for specialisation section: 48 of 120 ECTS credits

c) Mark for supplementary section: 24 of 120 ECTS credits

d) Mark for master's thesis: 30 of 120 ECTS credits

1.8 Rules for failed attempts

Students may retake module examinations that they have failed. The number of attempts is limited to three per module. Modules offered by faculties other than the Faculty of Management, Economics and Social Sciences ("WiSo Faculty") may be subject to different rules.

After failing an exam three times, the <u>WiSo Student Service Point (WiSSPo)</u> provides information regarding the possibility and the requirements to receiving additional resit attempts. If none of the first three examination attempts were failed due to cheating or to an offence, further two resit attempts can be granted at any point of the programme. Students who have accumulated at least 90 ECTS can be granted a further additional attempt. If a student fails an examination in the two additional attempts and the extra attempt for students with 90 ECTS or more,

valid for students of the ER 2021 (enrolment from winter semester 2021/22)

they are deemed to have failed the programme at the final attempt. Where a module examination consists of several components, the candidate must obtain a "bestanden" (pass) mark, or at least an "ausreichend (4,0)" (sufficient) mark, in all of the examination components. All components marked "mangelhaft (5,0)" or "nicht bestanden" (fail) must be retaken.

It is not possible to resit module examinations that have already been passed.

A failed master's thesis can be retaken once, with a new topic. Students can only register for a second attempt after the result of their first attempt being announced.

2 Support for students

2.1 First Point of Contact for Questions and Counselling

The <u>WiSo Student Service Point</u> (WissPo) is the first, central contact point for students who have questions and problems during their studies. WissPo is also the first point of contact for further counselling offers, e.g. studying abroad, wellbeing, careers guidance. Students can contact WissPo via phone, email or visit in person. Please take note of the opening times and contact details on the website.

2.2 Course registration in KLIPS 2.0

KLIPS 2.0 is the central campus management system of the University of Cologne. At the WiSo Faculty, KLIPS 2.0 serves as a student organisation tool. Students should use it as an online course catalogue, for registration and deregistration of courses and examinations, as well as an overview of the complete study programme and calendar. Information on current dates and deadlines of the WiSo faculty, as well as video tutorials and FAQs about KLIPS can be found on the <u>WiSo-KLIPS-Support</u> website. If you have further questions, please contact WiSo-KLIPS-Support via this <u>contact form</u>. For questions regarding your KLIPS account, please contact the central <u>KLIPS support</u> team.

2.3 Exam registration in KLIPS 2.0

Examinations for the programme are always managed via KLIPS 2.0. Students must register for examinations by the specified deadlines. Please note that the registration for courses without restrictions on participation and the registration for the corresponding module examinations are two separate processes in KLIPS 2.0. In courses where participation restrictions exist, the examination registration is generally only possible if the course registration has been submitted beforehand. Most module examinations with a written test format are offered twice per semester. Often, this will be to "space out" the dates, i.e. students can choose the date that best fits their examination schedule. In some cases, however, the second examination may be a genuine repetition of the first, depending on the department/institute concerned.

All examination candidates at the faculty are entitled to see their examination papers after they have been marked. For more information, please visit the <u>WiSo Examination Office</u> website.

Legally binding information concerning examinations and examination procedures is provided by the WiSo Faculty Examination Office. It also issues transcripts of records in German and

valid for students of the ER 2021 (enrolment from winter semester 2021/22)

English, ranking certificates and letters of assignment to the appropriate term of the programme. All the necessary information and contact details can be found on the <u>examination</u> <u>office website</u>.

¹ This module was offered for the last time according to the planned rotation in the academic year 2023/2024.

² It is no longer possible to register for the examination if the "SpM Selected Issues in Behavioural Supply Chain Management" examination has previously been successfully completed. Recognition of successfully completed work from the "SpM Selected Issues in Behavioural Supply Chain Management" is excluded.

³ The registration for the examination and recognition is not possible if the examination for the module "SuM Energy and Climate Change I" has already been successfully completed.

⁴ The registration for the examination and recognition is not possible if the examination for the module "SuM Energy and Climate Change II" has already been successfully completed.

⁵ The registration for the examination and recognition is not possible if the examination for the module "SuM Energy and Climate Change III" has already been successfully completed.

⁶ The registration for the examination and recognition is not possible if the examination for the module "SuM Energy and Climate Change IV" has already been successfully completed.

valid for students of the ER 2021 (enrolment from winter semester 2021/22)

3.4 Extracurricular course me

In addition to their regular studies master's students have the opportunity to take part in extracurricular courses, in which both academic and vocational skills are taught. Thus, studies can have an academic and a professional orientation, serving development of professional competences. The extracurricular course me intends to promote and impart competences that go beyond specialist knowledge or that concern basic scientific or personal attitudes, such as: scientific curiosity, systematic and analytical thinking, dealing with complexity, solution-orientation, the ability to work in a team, foreign language competence and other skills.

The extracurricular course me is offered jointly by the faculties and the Professional Centre of the University of Cologne. The me enables students to pursue their own additional interests, to gain insights into other subjects and faculties, to attend events of social importance, to acquire professionally relevant skills and to attend language courses. In addition, students are offered learning and study aids as part of the extracurricular me, e.g. for scientific work or literature research. Extracurricular courses are not credited, but the participation is noted on the transcript of records.

3.5 Master's thesis

The master's thesis, which carries 30 ECTS credits, is written towards the end of the me. It is intended to show that the student is capable of conducting academic work on and reflecting on a specific problem related to the subject matter covered in the me, while using the necessary methods within a specified period. The topic of the master's thesis must come from the specialisation section or from the subject group taken by the candidate in the supplementary section. If the topic relates to the supplementary section, the candidate must already have accumulated 18 ECTS credits in said supplementary section.

Group master's theses are also permitted provided a clear distinction between and assessment of each candidate's contribution is possible. Objective criteria that make a clear distinction possible, such as sections, page numbers or topics, are used to indicate which student made which contribution. The total workload required of each group member must exceed the requirements for individual masters' theses to an appropriate extent. The difficulty and content of a group thesis must meet the same requirements as for theses undertaken individually and independently. The contribution made by each individual must meet the requirements for masters' theses.

To register to do their master's thesis, students must have accumulated a minimum of 60 ECTS credits. They may take no longer than six months to write the thesis. More detailed information on master's theses can be found in the Examination Regulations.

2	This module int managers and e ethics and fairne evaluated in the	Module Content This module introduces basic business ethics concepts and applies them to decision making of managers and employees. It draws on standard ethics theories, like teleology, deontology, virtue ethics and fairness concepts. Business decisions in organisations and markets are discussed and evaluated in the light of these foundations. Case studies are employed to illustrate and apply the theoretical concepts.							
3	Students understand ac analyse curre assess and di solve team-in justify and del evaluate their tentials act responsib critically evalu	understand advanced, specialized theories / methods analyse current questions and challenges assess and discuss findings and research results of specialized theories / methods solve team-internal conflicts and target divergences independently justify and defend (independently developed) positions or problem solutions evaluate their own action processes in self- and external reflection and identify development potentials act responsibly considering ecological, social and ethical criteria critically evaluate current social developments and develop alternative solutions know and understand the relevant methods and theories for the points mentioned above under

SpM Bran	SpM Brand Management					
Module Code 1266MSBMG1		Workload 180h	ECTS Credits	Module Language English	Module Availability every 2nd term - sum- mer term	Duration 1 Term
1	Courses a) Brand Management b) Digital Brand and Customer Analytics c) Building Brands through Innovation		Contact Hours a) 45h b) 45h c) 45h	Self-Studies a) 135h b) 135h c) 135h	Course Language a) English b) English c) English	

2 Module Content

- a) The module covers key questions and challenges of building and managing brands. It consists of both conceptual and applied elements, including presentations by students, case studies, discussions and guest speakers from industry. Students are expected to engage in their own reading of the literature in addition to attending lectures and participating in exercises. Furthermore, they are expected to organise their learning processes independently.
- b) In today's increasingly digital landscape, businesses are constantly seeking innovative ways to gain a competitive edge. One powerful avenue for achieving this lies in the realm of digital brand and customer analytics. This lecture provides a comprehensive overview of how data-driven insights can shape and optimize brand strategies while enhancing the overall customer experience.

Participants will gain insights into how data from different sources (e.g., social media, reviews) can be harnessed to measure the achievement of desirable brand management outcomes via variables such as brand awareness and customer satisfaction. Further application contexts are the extraction of brand characteristics with optimization potential from review data, segmenting customers, and enhancing customer loyalty. Both fundamental methods (e.g. survey design, causality) and modern advanced methods (e.g. artificial intelligence, image classification) are covered. In the exercise sessions, participants will learn how to apply this knowledge practically with state-of-the-art analysis tools, using the software R.

Throughout the lecture, attendees will also gain insights into the ethical considerations surrounding digital brand and customer analytics. The discussion will touch upon topics such as data privacy and security, ensuring participants understand the importance of responsible data usage in today's digital marketing landscape.

By the end of this lecture, participants will have a solid foundation in digital brand and customer analytics, equipped with the knowledge and tools to harness data effectively to inform strategic decision-making, enhance brand performance, and create meaningful customer experiences in the digital era.

c) The course "Building Brands through Innovation" teaches how companies can leverage current macro trends (e.g., digital transformation, generative AI, need to protect the environment) to build strong brands and create an outstanding customer experience. Participants will get a comprehensive overview of the basic concepts, theories, and methods in product and business model innovation and their practical application, especially in the context of typical corporate vs. start-up challenges. Participants will be experiencing a highly immersive learning curriculum, amongst others through interactive sessions with top corporate and start-up leaders, covering various innovation practices, trends, challenges and some of the most up-to-date solutions.

3 Learning Objectives

Students...

- ... understand advanced, specialized marketing theories, concepts, and methods in the domain of brand management.
- ... assess and discuss findings and research results of specialized marketing theories, concepts, and methods in the domain of brand management.
- ... act responsibly considering ecological, social and ethical criteria.

	know and understand the relevant methods and theories for the points mentioned above under "Module content".
4	Teaching and Learning Methods lecture practice
5	Module Entry Requirements Recommendation: Basic knowledge of marketing and multivariate methods (e.g., regression analysis, analysis of variance)

Module Code 1266MSDSM		Workload 180h	ECTS Credits	Module Language English	Module Availability every 2nd term - sum- mer term	Duration 1 Term		
1	Courses Digital Strategy	Courses Digital Strategy and Marketing Hours 45h Contact Hours 45h Course Language English						
2	Module Content The emergence of the internet, mobile devices, the ability to automate tasks and the abundance of data is dramatically changing society and businesses. This module exposes students to a wide range of issues and questions related to this "digital" transformation. The module consists of both conceptual as well as applied tools and frameworks to understand business models and the organization of industries. The module aims at covering both the supply side (infrastructure, operations, etc.) as well as the demand side (customer, marketing, etc.). Students are expected to share their own knowledge and to use ongoing events (e.g., new companies, current news, IPOs, etc.) to apply the concepts they learn.							
3	Learning Objectives Students understand economic and strategic frameworks related to industrial organization, business models, and tactical decisions analyse current questions and challenges related to the ongoing changes in business and society as a result of digital technologies assess and discuss findings and research results of specialised theories / methods justify and defend (independently developed) positions or problem solutions act responsibly considering ecological, social and ethical criteria critically evaluate current social developments and develop alternative solutions know and understand the relevant methods and theories for the points mentioned above under "Module content".							
4	Teaching and L lecture practice	earning Meth	ods					
5	Module Entry R Recommendation	=	edge of marketinç	g and economic	es			
6	Mode of End-Of-Module Examination Written test: WT (60)							
7	Prerequisites for Awarding of Credit Points Passing the module examination

valid for students of the ER 2021 (enrolment from winter semester 2021/22)

Module Code 1277MSISY2		Workload 180h	ECTS Credits	Module Language English	Module Availability every term	Duration 1 Term
1	Courses a) Emerging Ele b) Digital Design c) IT Entreprene d) Bayesian Dar	n eurship	ss	Contact Hours a) 45h b) 30h c) 50h d) 45h	Self-Studies a) 135h b) 150h c) 130h d) 135h	Course Language a) English b) English c) English d) English

- Current IT trends and the transformation of electronic business into ""ambient business" in the context of networked and computerised objects and environments (Internet of Things, smart Environments)
- Conceptual basics of relevant technologies (including sensors, RFID, telecommunication)
- Design and applications of smart environments
- Design of intuitive human-computer interaction (HCI)
- · Context awareness and context-based services
- · Freely offering and sharing Information as a way of adding value
- Economic, social and ethical effects of increasingly omnipresent information technology

b) Digital Design

Introduction to product design and digital innovation

Emerging digital technology stacks (hardware and software.)

System development practices appropriate for complex contexts and requirements.

Developing ideas to solve the design challenge.

Project and team management

Design and implementation of information systems

Prototyping and testing

- c) IT Entrepreneurship
- Fundamentals of entrepreneurship
- · Forms of entrepreneurship
- · Process models of entrepreneurship
- IT-centered start-up industries
- · Digital technologies as enablers and triggers of entrepreneurship
- Practices for developing and presenting start-up ideas
- d) Bayesian Data Analytics
- Advanced methods for data analysis of business data; alternating topics based on real research projects, e.g.:
- Ensemble methods
- Social media and network analysis
- · Text analytics, text mining, NLP
- Neural Nets
- Heterogeneous Treatment Effects
- Multi-Armed Bandits

3 Learning Objectives

Students...

- ... analyse current questions and challenges:
- ... a) in the area of latest technical and business-related developments in (emerging) electronic businesses.

	b) in data analytics, data warehousing, and data mining c) in IT-centric entrepreneurship d) in data analysis for entrepreneurs act responsibly considering ecological, social and ethical criteria critically evaluate current social developments and develop alternative solutions develop work processes for real problems and challenges know and understand the relevant methods and theories for the points mentioned above under "Module content".
4	Teaching and Learning Methods lecture practice
5	Module Entry Requirements none
6	Mode of End-Of-Module Examination Written test: PO
7	Prerequisites for Awarding of Credit Points Passing the written examination of one course. A course is to be attended; the written examination relates to the content of one course.

9	Module Manager UnivProf. Dr. Christoph Rosenkranz
10	Miscellaneous a) Lecture is held in a project-based style. Students develop application scenarios and/ or prototypes for emerging electronic business, implement them, and present them in class. b) The course will employ a project-based format. c) Required readings are announced at the beginning of the semester.

valid for students of the ER 2021 (enrolment from winter semester 2021/22)

SpM Information Systems III								
Module Code 1277MSISY3		Workload 180h ECTS Credits 6		Module Language English	Module Availability every term	Duration 1 Term		
1	Courses a) Artificial Intel agement b) Applied Math c) Decision Mal d) Metaverse Tels	nematical Optir king under Und	mization	Contact Hours a) 50h b) 45h c) 30h d) 50h	Self-Stud- ies a) 130h b) 135h c) 150h d) 130h	Course Language a) English b) English c) English d) English		

2 Module Content

a) Artificial Intelligence and Information Management

Assess recent developments in AI, in particular the role of Artificial Neural Networks (Neural Networks, NNs)

Learn and deploy prominent computer vision models (Convolutional Neural Networks, CNNs) Learn and deploy most recent language models and transformer approaches to "compute text" (Natural Language Processing, NLP)

Learn about the challenges semi-structured and unstructured data poses for analysis

Think of (new) applications in the field of Information Management based on the processing of unstructured and semi-structured data

Get sensitive towards managerial implications of the advancements in AI for Information Management:

How to create Al-driven innovations (product, processes, business models)

Learn about the role of the data value chain and the transformative power of AI for data-driven businesses

Understand how companies build AI capability

What does the intensified application of AI mean for the future of work and separation of work between humans and machines

Learn about "Responsible AI" and seize the challenges of an "eXplainable AI (XAI)"

Understand the fundamental problem of bias (in data, in models, in algorithms) and ethical challenges. Also get equipped with concepts and methods to alleviate problems of unfair profiling and incompliant use of data.

Discuss the current state of AI regulation

b) Applied Mathematical Optimization

Fundamentals of Sustainable Information Systems

Fundamentals of electricity markets

Domain knowledge in Sustainable Energy

Applied methods of Mathematical Optimization as well as their implementation; in particular: Linear Programming & solution strategies, Bi-Level-, stochastic-, robust-, and distributed optimization as well as decomposition

Modern use cases from leading research

- c) Decision Making under Uncertainty
- Probabilistics
- Bayesian Networks
- (Hidden) Markov Decision Process
- Dynamic Programming
- · Forecasting and Time-SeriesPrognose und Zeitreihenanalyse
- Agent-based Decision and Reinforcement Learning

_	· · · · · · · · · · · · · · · · · · ·
	d) Metaverse Technologies and Business Models • History and evolution of the Metaverse • Current trends and proto-metaverses • Metaverse technologies (hardware and software) and standards • Metaverse design and artifacts • Metaverse governance and regulation • Business models and monetization strategies
3	Learning Objectives Students communicate continuously and purposefully in diverse teams solve team-internal conflicts and target divergences independently justify and defend (independently developed) positions or problem solutions evaluate their own action processes in self- and external reflection and identify development potentials develop work processes for real problems and challenges know and understand the relevant methods and theories for the points mentioned above under "Module content".
4	Teaching and Learning Methods lecture practice
5	Module Entry Requirements none
6	Mode of End-Of-Module Examination Written test: PO
7	Prerequisites for Awarding of Credit Points Passing the written examination of one course. A course is to be attended; the written examination relates to the content of one course.
